Message from President

2020 was a year unlike any other. The COVID-19 pandemic and the lockdowns wreaked havoc across the globe with millions of deaths. Over a year later, our communities are still grappling with the losses they faced – of lives, jobs, education, and well-being.

During the last year, we have continued to build on our past successes and work with our partners, old and new, to impact the lives of a larger number of people around the country. We have mobilised more resources and forged new partnerships while strengthening existing ones.

Within this report you will find several examples of the results that we achieved, driven by our goal to create an impact. We ensure that every programme, every new initiative and every rupee makes the maximum impact on the lives of individuals we serve. Our COVID-19 response efforts brought us new partnerships with companies, communities and individuals and we managed to reach out to those in dire need - frontline healthcare workers, hospitals, daily wage earners and migrant families. The pandemic has taught us to have compassion for each other, take care of those in need and ameliorate hardship within our span of activity.

This report highlights our programmes and brings to focus the people and communities we helped, as well as those who made it possible. Our approach has always been community-based, which would be impossible without the assistance of our corporate, institutional, government and community partners. We are incredibly grateful for their unwavering support.

K C Malhotra

President

Society for Action in Community Health (SACH)

Message from CEO

These are the times of rapid change. A natural disaster, sudden job loss or an unexpected illness can affect a family's survival. Yet it also is an age of incredible generosity. With the continued support, Society for Action in Community Health has been able to reach even more people with opportunities, health and lasting change. We've accomplished this by developing and implementing programmes that promote the common good by bringing together a diverse range of stakeholders, including corporations, individuals, non-governmental organisations, and institutional partners.

The year 2020-21 has been quite engaging for Society for Action in Community Health (SACH). Our achievements this year are proof of the hard work and commitment of our amazing team. We scaled up existing programmes and implemented new ones to reach out to more individuals. We worked extensively on health-related interventions. We worked towards a cleaner and greener city, and also scaled up the initiatives on road safety programmes. Our emergency response efforts has offered relief to communities across 4 states, and provide support through distribution of essential protective kits, food packets, solar units, etc.

Although this report covers the year till March 31, 2020, it was clear that we were on the verge of a pandemic as severe as the one seen a century ago. The pandemic has taught us to care for one another and help those in need, and as a result of our COVID-19 response efforts, we were able to assist those who were most in need. Within this report you will find several other examples of the results that we achieved, driven by our commitment towards the society. We ensure that every programme and every new initiative makes the maximum impact on the lives of individuals we serve.

K P Rajendran

Chief Executive Officer

Society for Action in Community Health (SACH)

Our Approach

- Commitment to Social Change

In order to ensure a world and a community that are more resilient with each passing year, we hope to make our communities stronger, more so, during these difficult times. We are passionate about enabling more members of our communities to realise their full potential by providing them with improved access to healthcare, education, stable employment, and safer communities.

About Us

SACH has been working towards development of the poor and disadvantaged communities. A force envisioned to advocate public health through health education and preventive medicine, SACH has now steered towards addressing the needs of the community holistically- covering domains of healthcare, education, livelihoods, safe sanitation, water, food, nutrition, environment and emergency response.

Objectives

- Create self-reliant communities through holistic development approach, maximise natural resource management, renewable energy and better environment.
- Create and strengthen strong grass-roots organisations of poor and ensure their sustainability through continue action.
- Create community enterprises for sustainable livelihoods of poor communities.
- Provide comprehensive health care services to rural communities for enhanced well-being.
- Enhance capacity of youth through awareness generation, skill building and support to start on businesses.
- Improve the education in the villages through comprehensive school improvement program-mes like repair and renovation school infrastructure, smart classes, training of teachers and capacity building of parents.

VISION
Creating self-reliant communities

MISSION
To implement sustainable initiatives by reaching out to the socially and economically disadvantaged and excluded.

A not-for-profit organization, SACH has been in operation for the past 30 years. We aim to develop and execute the most effective solutions to community challenges in both urban and rural regions around the country.

Programmatic Interventions/ Thematic Areas:

SACH has identified six key areas for interventions and developed sustainable models based on years of expertise and understanding of the requirements of social development. The most urgent social issues in our communities are covered by these six areas of attention, with our work focusing on addressing these issues and their underlying causes.

**Promotion of Enterprises
Skill Development &
Livelihood Enhancement**

01

Ensuring opportunities for livelihood security and financial stability

**Promoting
Quality Education/
Learning**

02

Ensuring access to quality education and learning opportunities

**Promotion of
WASH &
Sanitization**

03

Creating infrastructure and behaviour change for better sanitation, and reducing vulnerability to diseases

**Health, Nutrition
& Wellbeing**

04

Cost effective healthcare management, geriatric care services, promotion of good health & wellbeing

**Renewable Energy &
Natural Resource
Management**

05

Climate change mitigation and promoting green environment

**Institution &
Capacity Building**

06

Building self-reliant and empowered communities

Skill Development & Livelihood Enhancement

Transforming the skill development ecosystem

Skill Development and Livelihood enhancement has been a key focal area of SACH, in improving the economic status of rural households. SACH works towards overall socio-economic development of target households through various skill building approaches including new skills and technologies in the agro-horticulture and livestock sectors. During this year, SACH worked with women and youths from 15 villages of Umsning district of Meghalaya and 18 villages of Ludhiana and Moga districts of Punjab.

SACH believes in providing expert assistance to promote a variety of options, alternative livelihood prospects for rural families, in order to expand their existing livelihood basket. It has been consciously trying to promote what is available at the local market so that there is no problems with the advancement in technology and techniques of cultivation. Rural farming sector requires skill upgradation and technological innovation. So SACH's efforts have been to build appropriate skills entuned with the development that is happening in the sector.

Accordingly, a number of interventions have been done in promoting appropriate skills in the agro-horticulture and livestock sectors. The key interventions include promotion of agro-horticulture activities like (vegetable cultivation, pineapple cultivation, strawberry cultivation, spice cultivation), animal husbandry on an entrepreneurship model.

Agro-Horticulture Activities:

SACH promotes agro-horticulture activities, as it improves farm incomes of the communities, by engaging them in cultivation activities other than their regular engagements like traditional farming practices of paddy cultivation. This would also provide them with an additional source of income.

Vegetable Cultivation

Agriculture is the main economic activity in Meghalaya, and Umsning Block is not away from this either. Promotion of vegetable cultivation means that these farmers can cultivate some other crop in their land after paddy harvesting, giving them an extra source of income. SACH promoted this activity among 20 farmers from Umsning district. This initiative not only provided these farmers with an extra source of income but also provided their families with a source of healthy and nutritious food. As a result, the farmers would now be involved in

a year round cultivation cycle. This would also help the beneficiaries adopt better agricultural practices thus diversifying their source of income as these vegetables could be sold in the local market. Under this initiative, support was provided in land preparation, land levelling along with good quality seeds, organic manure and pesticides to improve and increase the fertility of the soil. Vegetables like french beans, mint leaves, radish, sweet potato, tomato, mustard, green peas, spinach, coriander, etc was grown by the farmers under this initiative.

Spice Cultivation

This initiative has been promoted in Umsning as it provides an additional source of income for the farmers. 20 farmers from the project villages were provided with a training manual in Khasi from

KVK-ICAR which provided insights on techniques on management of crops. Saplings of high yielding ginger and turmeric along with organic manure was also provided. Support was also provided on land preparation and land levelling. Mainly ginger and turmeric were promoted in this initiative because ginger and turmeric are important cash crops which are sold in the fresh condition as well as processed products like dried ginger, ginger powder, turmeric powder, essential oils, etc. Ginger is also utilized widely as spice for pickles, candies and as a medicinal herb. Ginger and turmeric are also one of the important ingredients for traditional medicines. Market linkages have been established for these farmers to ensure better prices, as a part of production-to-sales support for sustainability.

Strawberry Cultivation

SACH introduced strawberry cultivation to 15 farmers from 14 villages in Meghalaya to provide an additional source of income. Beneficiaries were given technical support from the strawberry association of the RiBhoi district, which had a detailed description on techniques of management of the crop. They also received support on land preparation and land levelling. Saplings of high yielding varieties of strawberries along with organic manure and bio-fertilisers was also provided to the beneficiaries.

Pineapple cultivation

Meghalaya is famous for its quality of pineapple produce. Almost all households are involved in small-scale cultivation of the fruit, mostly for self-consumption and a small quantity of the harvested fruit is sold locally. This fruit grows in abundance in the north east region of our country. Pineapples are also an excellent source of energy and are rich in vitamins and enzymes that cause easy digestion. Also as it is a rain fed crop, it checks soil erosion. So SACH promoted Pineapple Cultivation for an extra source of income. 15 beneficiaries from 13 villages were supported for this activity. High yielding saplings like Giant Kew and Queen were distributed amongst the beneficiaries as these varieties were with low fibre and high juice content. Market linkages have been

established for these farmers to ensure better prices, as a part of production-to-sales support for sustainability. Under the support of the village cooperative, a buy back agreement was established where the cooperative society would procure the harvest and further process it into a range of products like pineapple jam, pineapple squash, etc. all of which would be marketed at the local market as well as the collective rural outlet setup.

Livestock Promotion

Most community members in the region are abreast of the knowledge of rearing animals and this intervention is aimed to improve their rearing practices scientifically by teaching them the right techniques and thereby improve the net returns. Systematic training and field level handholding support was provided to 60 farming families in Meghalaya on a regular basis. The process involved providing the individuals with formal training on livestock rearing with the support of Rural Research and Training Centre (RRTC), Umran, Meghalaya, where the technical experts shared proper techniques to manage animals in order to reduce the mortality and morbidity incidents otherwise faced by these individu-

als while rearing them. It was followed up with regular visits to the farms by experts for handholding and for practical guidance. Suitable breeds of backyard poultry and pigs were provided to ensure better productivity from the beginning.

An Integrated goat farm was built in Punjab which could accommodate around 75 goats. Communities were given an intensive training on goat rearing in order to prevent their death. Goat's fodder was being cultivated by the communities itself to decrease the mortality rate. Cultivation of moringa, maize, bajra and moong was being undertaken for provision of nutritional green fodder for them to remain healthy.

Promoting Quality Education/ Learning

Promoting quality Education/Learning: For a long time, SACH has prioritised the promotion of high-quality education. Education has been identified as one of the community's most pressing needs, especially considering the poor status of facilities provided at government schools. SACH mostly collaborates with government schools in order to provide benefits to children from low-income families. SACH has been working on both hardware and software of education enhancement. SACH has been working hard to promote quality education in various parts of the country viz., Punjab and Meghalaya.

**Nurturing minds
for a better
tomorrow**

SACH also collaborates with major corporations such as Bennet and Coleman Ltd., which owns the Times Now and Times Group, to promote job-oriented education (Teach India) for school dropouts of urban cities. Over 5000 children have benefited from these courses in Delhi NCR, Bengaluru and Karnataka. SACH has worked with a number of government schools in Meghalaya and Punjab to improve school education throughout the year. The following were some of the most important aspects of fostering high-quality education:

Upgradation of school infrastructure-

SACH remodelled a school building in Kyrdemkulai village. Full scale renovation was done which included replacement of flooring, wiring and roofs. Toilets which were in a dilapidated state were repaired. These schools lacked basic facilities like hygienic toilets, benches and desks, clean class rooms, verandas, etc. Dividers were provided between different classes so that one class would not be disturbed by the other. SACH undertook this initiative and upgraded the schools to enhance the quality of education and thus created a conducive physical environment for teaching and learning for both teachers and students. All these interventions created a better learning environment for children as well as improving the overall academic performance of the students.

Distribution of dustbins in schools-

SACH installed dustbins in all classes as well as public areas in five schools of Umsning block to promote green environment, clean premises and teach children early on waste management. Awareness sessions were also conducted to make children understand the importance of waste management. Blue and green dustbins were placed for children to segregate their waste between bio-degradable and non-biodegradable waste. It was taken as an initiative to promote a clean and healthy environment in students as well as teachers.

Life skills sessions

Due to the pandemic and the government lockdown, mental health of people started to deteriorate from the fear of the spread of the infection and also being locked in their houses due to restrictive movements ensured by the government. Communities felt stranded and caged due to the strict lockdown issued by the government to contain the spread of the virus. Of these children were very disturbed as they were used to going out and playing and government implied lockdown restricted them from doing that.

Cases of anxiety and depression began to rise in great numbers. So SACH along with Mind Plus Healthcare arranged for mental health sessions with highly qualified psychologists/ psychiatrists. These sessions facilitated the communities with mindfulness on the current issue of the pandemic. Extra attention was given to people who were facing financial issues due to losing their jobs or women facing domestic violence due to their husbands being home-bound. A session at each of the village clusters were organized with the community cadre to discuss and teach various practices of mindfulness. The sessions entailed how cultivating of mindfulness can be helpful for all ages, what are the reasons to do the same, different exercises under mindfulness such as mindful breathing, listening, eating, concepts like 'Leaves on a stream', 'Thoughts as clouds' and games such as 'The name game', 'The wiggle & freeze game', 'Tea drinking game' etc. Feedback from the community cadre was also taken on which the next sessions would be built. These sessions not only improved communities mental health but also broke certain myths they had regarding attitude, behaviour and practices.

WASH And Sanitation

Promoting health through preventive and curative services has always been a strength of SACH since inception. During the year, SACH put its efforts towards building household level toilets as open defecation is a major problem in its vision of cleanliness and sanitation. It also spread awareness about the ongoing pandemic.

Construction of household toilets

Open defecation is still persistent a practice in many parts of India. However, it not only causes pollution but can also cause a number of health problems and diseases. 88% of diarrheal cases are caused by unsafe water supply and inadequate sanitation and hygiene. To address all these problems SACH constructed proper toilets in households under its Water, Sanitation and Hygiene programme. Under this initiative, 298 households of Umsning block were provided with toilets. For proper management of the unit, sanitation kit consisting of cleaning kit, bucket etc was also provided to the households. Awareness campaigns were held which explained people about the health hazards of open defecation and benefits of using toilets as behavioural change was equally important. Gradually as time has passed this change has been noticed in people as the communities have become more inclined towards the usage of toilets. This has greatly helped in reducing the incidence of diarrhoea and other water borne diseases thus improving the overall quality of life.

Awareness campaigns on COVID-19

Amidst the COVID-19 pandemic, village wise awareness campaigns and sessions were conducted to stop the spread of the virus and to help members of the community to safeguard themselves during this difficult time. The sessions were held at household level in order to promote the importance of social distancing and follow covid 19 appropriate behaviour and practices. Pamphlets were being distributed amongst the communities. Announcements through public vehicles being made to make communities aware about the situation. Covid 19 protection kits consisting of face masks, hand sanitisers, hand soaps along with various IEC materials such as posters on safe practices were being distributed at household level. People with co-morbidity conditions such as diabetes, hypertension, obesity were being made aware of the fact that they were at higher risk of contracting the virus.

WASH & Environment Health

Environmental health is an essential topic that is currently being overlooked. SACH works in this subject in a holistic manner through initiatives such as

Pond Rejuvenation

Ponds are ecosystems in themselves, generated by the coexistence of plants, animals, microorganisms, and their surroundings. Pond rejuvenation entails a variety of actions such as weed removal, liming, and water disinfection, as well as protection and beautifying measures to avoid garbage disposal and embankment erosion. In Punjab, SACH built 3 pit

waste stabilization ponds, to treat waste naturally and promote sanitisation. In this initiative, waste water is treated and purified and is made fit for agricultural uses like watering the fields and bathing purposes. Due to this activity, health hazards due to water borne diseases have decreased massively. The intervention is not very demanding in terms of maintenance and sustainability. The technology followed in itself is to sustain the management of the waste water of the villages. It will require time to time cleaning of the de-siltation tanks and basic repair and maintenance.

Clean Development Mechanism

Climate change and global warming are two of the most pressing concerns of today's time. SACH, as a responsible organisation, is working on it through initiatives such as the UN's Clean Development Mechanism (CDM).

Providing Happy Seeder Units

SACH delivered 9 Happy Seeder units in Moga and Ludhiana to control crop residue burning as an alternative to paddy straw burning and to address the issue of air pollution. It's a tractor-drawn effort that lets farmers to sow the winter crop without waiting for the previous season's residue to be removed. Using the Zero-Tillage method, the paddy straw from the Kharif crop is left to degrade in the farm, providing organic manure and significant amounts of plant

nutrients. Farmers in these areas utilise these machines on a rotational basis to prepare the soil for the sowing of new crops.

Installation of Solar Street Lights

Erratic electric supply became a major concern for people of Umsning block as it led to pitch dark roads at night. People feared to pass by the streets post sunset as they thought thieves and thugs would take advantage of the dark and loot them. Under the HRD Project, SACH supported a number of villagers either financially or by providing the community required equipments. Installation of a number of street lights in villages of Umsning cluster in Meghalaya started. This activity not only provided security but also improves the overall outlook of the village.

Inculcating
and ensuring
ecological
responsibility

Institution Building

Development interventions of SACH had always been guided by the skill of organising the poor and investing in their capacities at all levels to help them improve their quality of life. All programmes of SACH were planned and implemented using the three key strategies of community based organisation, their capacity building, and investing in community institutions.

SACH created vibrant institutions like Village Development Committee (VDC), self-help groups (SHGs) user groups in order to strengthen the community and build their capacities in order to achieve a sustainable development. VDCs were formed in 10 villages of the Umsning district. Multiple training sessions were held from time to time for the VDCs and SHGs to guide and strengthen their capacities. The VDCs were trained on basics of co-operation, management of the societies, basic accounting and book-keeping, etc. A series of training programmes were specifically designed to meet the various capacity needs of the members.

Training to CRPs-

During the year, SACH invested significantly in training and capacity of communities and their institutions to ensure the long term benefits. Special efforts were made to strengthen the cadres of Community Resource Persons (CRPs) through Training of Trainers (TOT). SACH collaborated with premier research institutes like Indian Council for Agricultural Research, Central Grass and Forage Research Institute, State Agricultural University, Krishi Vigyan Kendra, Indian Institute of Horticultural Research, Regional Rural Technology Centre and similar professional institutes for

technical and training inputs to build capacities of the community and their institutions. The Community resource persons (CRPs) are given training every month and regular handholding support on improving the understanding towards development programmes and its management, maintaining books of records, and linking various development programmes from organisations to the community. An exposure visit was also organised for the CRPs to the previous project villages where they were practically able to the work implemented in the past years.
